## FOREWORD

This Final Technical Report covers Tasks II and III of three tasks to be completed under the terms of a research project entitled "An Inventory of Documented Knowledge of the Military Advisor Role and the FAS and MAO Programs," Contract No. DAHC 19-73-C-0005. The task titles are:

Task II: Implications for FAO Training Derived from an Analysis of the MAO and FAS Programs

Task III: Suggestions for Change in In-Country Training Gathered from FASP In-Country Training Reports.

The stated objectives of the tasks are:

Task II: (a) To identify current FASP and MAOP training and other program requirements, (b) to define the current and projected structures of their respective curricula in service and civilian schools, (c) to define the career development opportunities and guidance offered by each program.

Task III: To survey the job experience and insights of FASP and MAOP members as revealed in their documented job experiences.

The conclusions of the report are based on a number of different sources:

1. Interviews with MAO and FAS administrative personnel.
2. MAOP, FASP, and FAO ARs.
3. Course outlines and POIs of MAO C&SC and C&GSC.
4. Graduate training reports of FASP members.

5. College catalogue descriptions of area programs attended by FASP members.
6. Interviews with directors of area programs attended by FASP members.
7. In-country training reports of FASP members.

On the basis of this information, we have suggested recommendations for the FAO Program aimed at better accommodating the merger per se, shortening the lengthy training period, or improving the training.

IMPLICATIONS FOR FAO TRAINING  
DERIVED FROM AN ANALYSIS OF  
THE MAO AND FAS PROGRAMS

## IMPLICATIONS FOR FAO TRAINING DERIVED FROM AN ANALYSIS OF THE MAO AND FAS PROGRAMS

Since FAO training represents a combining of what was previously MAO and FAS training (see Tab A for a comparison of the FAO selection and training requirements with those of MAO and FAS), HSR was asked to analyze the content of academic training in the MAO and FAS Programs with a view to suggesting possible changes for the FAO Program which would either better accommodate the merger per se, shorten the lengthy training period (presently a minimum of three years), or improve the training. Consequently, this section of the report presents the results of our analysis of the Military Assistance Officer Command and Staff Course (MAO C&SC) and of the FASP Graduate Training. A second part of this section discusses the career development opportunities and guidance offered by the MAO and FAS Programs.

### The MAO C&SC Curricula

Training for members of the Military Assistance Officer Program consists of 22 weeks in the Command and Staff Course (soon to be renamed the FAO C&SC) located in the Military Advisor School at Ft. Bragg. The POI for the course states that its purpose is:

To qualify officers for assignments in the field of international security assistance by providing a working knowledge of the objectives, concepts, doctrine, procedures, and techniques applicable to security assistance operations, and politico-military activities throughout the conflict spectrum. (p. 101)

To accomplish this objective, the MAO C&SC has 880 scheduled hours. Of these hours, 662 are devoted to academic subjects while 218 are devoted to non-academic subjects such as in- and out-processing, and "open-time." The academic portion of the course is divided into seven major "annexes" under which a number of different, but related, topics are discussed (see Tab B for a listing of these topics). These annexes are briefly described below in terms of their "plan of instruction" stated objectives.

<u>Annex</u>	<u>Objective</u>
Introduction (5 hours)	To provide the student with a working knowledge of the Military Assistance Officer Program and Military Assistance Officer Command and Staff Course.
Operational Environment (133 hours)	To provide the student with understanding of the dynamic processes and environmental conditions in the less-developed world which have a bearing on the Military Assistance Officer.
Considerations for National Planning (120 hours)	To provide the student an understanding of the complexities and interdependence of internal development and internal defense requirements, programs, plans, and operations in less-developed countries. To enable the student to identify the manner in which natural and human resources, energy and information are managed.
Security Assistance (152 hours)	To provide a general body of information that will give a working knowledge of the purpose of security assistance and the U. S. national factors that have direct bearing on U. S. policy. To prepare the student to act as a manager in execution of U. S. security assistance programs or in design of plans.

<u>Annex</u>	<u>Objective</u>
Civil-Military Operations (61 hours)	To assure that the student develops a working knowledge of the managerial and staff responsibilities of the civil-military operations officer (CMO) with particular emphasis placed on managing psychological operations and civil affairs resources activities.
Guest Speaker Support (131 hours)	To supplement resident faculty instruction on a weekly basis with guest speakers of such stature and experience so as to provide the students access to information and viewpoints of distinguished military and civilian, government and non-government authorities on subjects relating to the theme of the week.
Electives (60 hours)	To supplement the basic POI with material designed to broaden the student's background and to increase the student's skill as a military assistance officer through a system which allows the student to select an option most appropriate to his individual needs.

#### Suggested Changes for the FAO C&SC

Our investigation of the MAO C&SC, both through an analysis of the POI for the course and through interviews with MAO C&SC administrators and instructors, suggests that the following changes might profitably be made in the course under FAO.

1. General instruction on the functions of attaches should be added to the FAO C&SC curricula in the Security Assistance Annex. In addition, relevant Guest Speaker support should be added and the Interdepartmental Agency Field Trip to Washington should include visits with DIA and other personnel who administer the attache program. Such an addition would recognize two facts: (1) that some FAO personnel will be tapped to serve as attaches, and (2) that many FAO positions will necessarily involve interaction with attaches.

2. A course on the roles and functions of the military advisor should be added to the Security Assistance Annex of the MAO C&SC curricula. There is currently not a course in the MAO C&SC which deals with this topic. This is despite (1) the fact that the mission of the MAO C&SC is to train officers in the field of military assistance, (2) a statement in the MAO AR (30 June 71, 1-1) that "the program provides a special career field for officers who have the critical skills needed to serve as commanders and advisors (underline ours)," (3) its location in the Military Advisor School, and (4) there are advisory positions in the duty position list. Such a course could easily be modeled after a similar course taught in the security assistance section of the Command and General Staff Course at Ft. Leavenworth (see Tab C, Item 7, for an outline of this course).
3. Under the assumption that the FAO training specified in AR 614-142 will be implemented and generally applied, the 36-hour Area Orientation course at C&SC should be eliminated.<sup>1</sup> It appears to be an unnecessary duplication of the type of area training the majority of FAO members will have already received in graduate school. (See Tab D.) Were this course oriented towards a military perspective of the world this conclusion would not be warranted for such a perspective will not be offered in graduate school.
4. Under the assumption that the FAO training specified in AR 614-142 will be implemented and generally applied, the Electives Annex of the MAO C&SC should be eliminated under FAO as a normal requirement for officer students. Four types of electives have been available,

---

<sup>1</sup>The 36-hour Area Orientation Course is itself a recent addition to the MAO C&SC. Prior to January, 1973 each class had been required to take an Area Orientation course 24 hours in length. In addition, they were also required to take three 3-hour Cross-Area Orientation courses. These were designed to give the students some understanding of the world areas in which they had not had the longer course. The additional hours now found in the Area Orientation course were obtained through the elimination of the four Cross-Area Orientation courses.

one of which had to be taken: The Graduate College Elective, the In-House Elective, the Independent Research Elective, and the Language Elective. With the merger, the Graduate College Elective will not normally be necessary as the majority of students will be coming to FAO C&SC with master's degrees. The In-House Elective, on the other hand, we were told in our interviews, has already been eliminated entirely (due to a lack of student interest). We were also told that Independent Research is discouraged because of its tendency to attract students who have had graduate training and who see it consequently as a course in which to use papers written while in graduate school. Finally, the Language Elective for credit will generally not be necessary as the majority of new FAO members will receive specialized language training under the FAO Program.

While all of these facts point to the non-necessity of the Elective Annex as a normal requirement for students, we do not recommend that they be eliminated entirely. Rather, they should still be available for those students who are deficient in some aspect of training generally not offered in C&SC, and for those students who desire to pursue some additional training for their own benefit (e. g. graduate training for those lacking advanced degrees or language training).

5. It may be possible to shorten the FAO C&SC by eliminating or substantially reducing the 218 hours of non-academic time now found in the MAO C&SC. Our initial impressions from discussions with MAO C&SC administrators is that much of this time is not needed but has merely been added to make the course a permanent change of station so that the officers can move their families to Ft. Bragg at Army expense. Supportive information for this is presently not available, however, and we reserve judgment as to the validity of this suggestion.

Implications of the Command and  
General Staff Course for FAO C&SC

For some time, administrative personnel of the MAO Program have been receiving reports that what is being taught in the MAO C&SC is being more or less duplicated in the "security assistance" portion of the electives half of the Command and General Staff Course (C&GSC) at Ft. Leavenworth, Kansas. If we accept for the moment, for discussion purposes only, the FAO assumption that all of its new members will be competitive for C&GSC, a number of possibilities emerge for shortening or making positive changes in the FAO training.

1. If the program overlap is extensive, FAO C&SC could simply be eliminated. FAO officers would get equivalent FAO C&SC training upon attendance at C&GSC. In this instance, few, if any, changes would have to be made in the C&GSC
2. If the program overlap is substantial, yet lacking in some essential aspects of the C&SC training, it might be possible to add these to the C&GSC curricula. As in 1., but requiring more effort, FAO C&SC would be eliminated and FAO officers would obtain equivalent training upon attendance at C&GSC. The additions to the C&GSC curricula would be facilitated by its new structure. While the first half of the course offers a common curriculum which everyone must take, the second half of the course is devoted to electives. Among these electives is an "advanced security assistance" course to which the necessary additions could conceivably be made.
3. If the overlap between the two programs is limited to only certain portions, it may still be possible to eliminate these from the FAO C&SC since the officer would obtain essentially the same material when he attends C&GSC. These hours could either be eliminated entirely from C&SC or oriented towards another topic.

4. A second alternative in the case of minimal overlap would be to introduce into the electives portion of C&GSC a "lean" FAO C&SC which all FAO members would be "required" to take. This would allow for a savings of four to six months of time. A variation on this would be to have the FAO officer take the "core" curriculum at Ft. Leavenworth and the "electives" curriculum in the FAO C&SC at Ft. Bragg. While this would limit FAO C&SC to only one class a year (as opposed to the present two), it is reasonable to assume that the class would be of a size sufficient to meet the needs of the FAO Program.

With these possible conditions and alternatives in mind we were asked to examine the extent of overlap between MAO C&SC and C&GSC. For this purpose, we made exploratory trips to both Ft. Bragg and Ft. Leavenworth, and, through interviews with key personnel in both programs and examination of curricula and course outlines, we have been able to make an assessment of the overlap between the two.

The Command and General Staff Course is a 28-week program and a necessary stepping stone for those officers destined to be the Army's leaders. As stated in the POI, the specific purpose of the C&GSC is:

To prepare selected officers for duty as commanders and as principal general staff officers with the Army in the field from division through Army group, and at the field Army support command and theater support command; to prepare these officers as Military Assistance Advisors (less language and area orientation); to provide them with an understanding of the functions of the Army General Staff and of major Army, joint, and combined commands; and to develop their intellectual depth and analytical ability.

As previously noted, C&GSC is divided into a "core" and "electives" curricula. Our concern in the seven-course core curriculum is with the "Security Assistance" course and in the electives curriculum with the "Advanced Security Assistance" course. The former comprises a 50-hour block

of instruction. Prior to the division of C&GSC into core and electives portions, it had been a 72-hour block of instruction. Its inclusion as one of the mission objectives of C&GSC and the fact that the hours were not halved along with the curricula are some indication of its perceived importance. The stated purpose of this course is to examine:

...the history, concepts, organization and patterns of insurgency and the effects of internal defense and internal development measures in countering it. A comparison of insurgent threats in selected national situations is used to stress the relationship of internal security to nation building. The role of military assistance in U. S. foreign policy is treated with emphasis on the organization and procedures for the development and execution of U. S. foreign assistance policies and the role of each major executive agency involved.

To accomplish this objective, the Security Assistance course is divided into nine subcourses. These mini-courses and their length in hours are:

1. Insurgency (6 hours)
2. Prevention of Insurgent War (6 hours)
3. Psychological Operations (4 hours)
4. Internal Defense Operations (8 hours)
5. Internal Development (4 hours)
6. Intercultural Communications (4 hours)
7. The Military Advisor (4 hours)
8. U. S. Foreign Assistance Program (6 hours)
9. U. S. Security Assistance Program (6 hours)

To ascertain the extent of overlap between FAO C&SC and C&GSC, we first obtained a course outline for each of the above subcourses. Each subcourse was divided into topics noting the length of time spent on each (see Tab C). The topics covered in each of the nine subcourses were then

compared to each of the subjects described in the MAO C&SC POI (see Tab B for a listing of these subjects). The results of these comparisons are presented in Table 1.

The left side of Table 1 lists the nine subcourses of the C&GSC Security Assistance while across the top of the table the six major annexes of C&SC are listed. Under each annex are the letters A, B, and C. The numbers under each A indicate the hours in a particular annex of MAO C&SC which duplicate material found in the C&GSC topic opposite that number. The numbers under each B represent the hours in a particular annex of MAO C&SC which cover in greater detail material only briefly mentioned in the C&GSC course opposite that number. Finally, the numbers under C indicate the hours in a particular MAO C&SC annex which deal with the same subject, but different material than is found in the C&GSC subcourse opposite that number. For comparative purposes, the most important numbers are those found at the bottom right hand side of the table in the Totals column. These four circled numbers indicate the total hours falling under each of A, B, and C, as well as under all three taken together.

These numbers indicate that:

1. The Security Assistance course at C&GSC utilizes material similar (if only peripherally so in some instances) to 382 of the 662 hours found in the academic portion of C&SC. This represents a little less than 60 percent of the hours found in the C&SC academic curricula
2. 172 of the above 382 hours represent material mentioned only briefly in C&GSC but covered in some detail in C&SC.
3. 181 of the above 382 hours represent similarity in subject matter only.

4. In determining overlap, the most important number is the total under A. These are the only hours in MAO C&SC which are more or less duplicated in C&GSC. From Table 1 it can be seen that this category includes only 29 of the hours (about five percent) found in the academic portion of C&GSC. This is a clear indication that the overlap between C&SC and C&GSC is minimal.

Similar results emerge from a comparison of MAO C&SC with the Advanced Security Assistance Course in C&GSC. These comparisons are found in Table 2. Unfortunately, they were made utilizing only the topical names for the subcourses found in this section. Course outlines were not available as they were still at press. While the conclusion cannot be as strongly stated as in the comparison made with the core course in security assistance, it again appears that the overlap is relatively minimal. Less than ten percent of the MAO C&SC material (42 hours) is considered in the Advanced Security Assistance course.

The results of our comparisons lead to the following conclusions:

1. The overlap in material between MAO C&SC and the Security Assistance and Advanced Security Assistance Courses of C&GSC is minimal. Consequently, C&GSC could serve as an alternative to FAO C&SC only with massive additions to the C&GSC curricula.
2. The minimal amount of duplicative overlap precludes the elimination of more than just a few of the topics presently covered in MAO C&SC. Even here, care would have to be taken to insure that where a topic was eliminated the continuity of that FAO Annex was not disrupted.
3. C&GSC might best be used to shorten the FAO training time by letting FAO members take the "core" curriculum of C&GSC but substitute the FAO C&SC (whether at Leavenworth or Bragg) for the electives portion of C&SC. The feasibility of such a suggestion would require a thorough investigation and is beyond the scope of this report.

Table 2. The Extent of Content Overlap Between  
the C&GS Course in Advanced Security Assistance  
and MAO C&S Courses

Exam	2 hrs		
	56 hrs		42 hrs

NOTE: Leavenworth hopes in the next year to turn each of the topics in the Advanced Security Assistance course into separate courses of 56 hours each.

### Graduate Training

Graduate training, an essential aspect of the FAS Program, is now a part of FAO training, and all new program members who do not already possess a master's degree will be sent to graduate school by the Army for twelve months to obtain one.

Unlike the FAS requirement, however, the degree may now be obtained in certain disciplines and not just in area studies (see Tab A for a comparison of FAS and FAO training requirements). More specifically, 217 of the FAO duty positions are validated for advanced degrees in something other than area studies (see Tab E, for a list of the acceptable disciplines). Most of these were formerly MAOP positions. The remaining 459 (or some two-thirds) of the FAO positions are validated for graduate degrees in area studies.

In addition, the AR implies, through its lack of differentiation, that officers enrolled in disciplinary programs are also expected, like those in area programs, to take area specific courses in a variety of disciplines. This seems reasonable in view of the fact that many of the 217 positions noted above are area oriented and require some area expertise. However, we feel that the present AR statement is not explicit or direct enough regarding the area specificity and disciplinary spread whichever type of degree is elected. Consequently we suggest some rewording.<sup>2</sup>

Our basis for this recommendation is the fact that under the present set up for FAS, there appears to be a pronounced imbalance in the kinds of area specific disciplinary courses taken by FAS members. This conclusion is, in turn, based on an analysis of the MA curricula of a sample of FASP members, an analysis undertaken without any particular end in

---

<sup>2</sup>See Recommendations, Item 6.

mind except to determine what kinds of specific area and disciplinary content lay behind the array of graduate degree labels.

Our sample for the analysis consisted of 167 FASP members who have either completed their master's degrees sometime during the past two years or who are still enrolled in graduate school. As graduate school information was not available to us for all FASP members it was not possible to randomly select the sample. Some may argue this limits the generalizability of our findings. It should not be forgotten, however, that while our sample was not obtained by random methods, it does represent the universe of all FASP members who have been enrolled in graduate school during the past three years. This, and the tendency of universities to be constantly modifying their programs in response to current "trends" in a field, probably makes our sample a better indicator of what FAO students can be expected to take in graduate school than had the sample been randomly selected and thus included FASP members who had been enrolled in graduate school much further in the past.

The information on the 167 FASP members was obtained from the Civil Schools Branch of OPO. Charged with keeping track of all officers enrolled in civilian colleges and universities, they quarterly or semesterly receive information from students, on Form 2125, regarding their training. From this form, we were able to abstract information regarding the title of the degree the student expected to receive, his area of specialization, if any, the department or program in which he was enrolled, and a listing of the courses he had taken or was to take.

It should be noted that in no instance are the tables and figures for this analysis based upon information from all 167 persons in our sample. The actual numbers for these range from 159 to 163. Furthermore, placement of some information has been on the basis of our reasoned, but nevertheless subjective, judgment. This is the result of what we found to

be an extremely ambiguous and unnecessarily repetitive form for keeping information regarding officers' civilian training. Although not a part of the contract, we feel compelled to offer a revision of Form 2125 (Tab F). While this revision will not eliminate the repetitiveness of the form, it should remove much of the ambiguity now found in the answers regarding majors, departments in which enrolled, courses taken and being taken, and titles of degrees expected. Such improvement should not only help Civil Schools Branch perform their job better but should also assist Program Managers to recover data more useful for planning.

Turning now to the analysis, Table 3 serves mainly to indicate the distribution of our sample by type of degree and by type of area or disciplinary major. As can be seen by the figures at the bottom right hand side of the two sections of the table, a majority of our sample (103) are taking or have taken their degrees in area studies. Sixty of the sample, however, are taking or have taken disciplinary degrees. This reflects the fact that many graduate schools do not offer area studies degrees. What they do offer is an area certificate of competence. That is, the student majors in an academic discipline but concentrates his effort in a specific world area. This can be contrasted to an area studies degree where the student majors in an area of the world but often concentrates his effort in a specific discipline.

In the case of our sample, these disciplines are history and political science. For those taking an area studies degree, 61 of the 65 (94 percent) of those for whom a major could be identified, were concentrating in one of these two subjects. Although the percentage is lower, a similar concentration is found in those taking disciplinary degrees. Forty-five of the 60 (75 percent) were taking degrees in history or political science (the latter includes International Relations and International Studies which are frequently subdivisions of Political Science Departments). By itself, this fact

**Table 3. M.A. Degrees and Major Fields of Study**

of concentration is not damaging, for it may be taken as merely an indication that these are the disciplines most amenable to area specialization and/or to what FASP members perceive their future roles to be. However, when this fact is combined with the additional results of our analysis it indicates a definite weakness in the FASP graduate training.

Figure 1 shows the exposure rate of all FASP students to different disciplines, while Figure 2 does the same thing for those students in our sample taking area degrees. Looking first at Figure 1, it can be seen that exposure rates resemble the disciplinary concentrations noted above. While 83 percent of the students have had at least one course in either history or political science the same thing is true for only 13 percent of the students in the case of anthropology, only 18 percent in the case of sociology, and only 28 percent in the case of economics. Similar results are found in Figure 2 for just those students taking area degrees. It does appear, however, that these latter FASP students are receiving a slightly broader disciplinary exposure than is true for the sample as a whole. This is particularly the case for economics and sociology where 41 percent and 24 percent of the students have had at least one course. At the same time, there is little change in the number who have had a course in anthropology (14 percent in Figure 2 versus 13 percent in Figure 1) and even a slight increase in the percentage who have had a history course (91 percent in Figure 2 versus 83 percent in Figure 1). What these two figures indicate, and what is further substantiated with the following figures, is that FASP graduate students have not been getting the exposure to as wide an array of disciplines as they should be. While history and political science are undeniably important in the pursuit of area expertise, so also are economics, sociology, and anthropology. These latter two, in particular, offer perspectives, whether at the general or

Figure 1. All Degrees by Exposure to Disciplinary Fields  
by All FASP Trainees

NOTE: As area specific literature courses are frequently located in language departments and utilized also as vehicles for language instruction, Language and Literature are considered in Figures 1 and 2 as one topic.

Figure 2. Area Degrees by Exposure to Disciplinary Courses

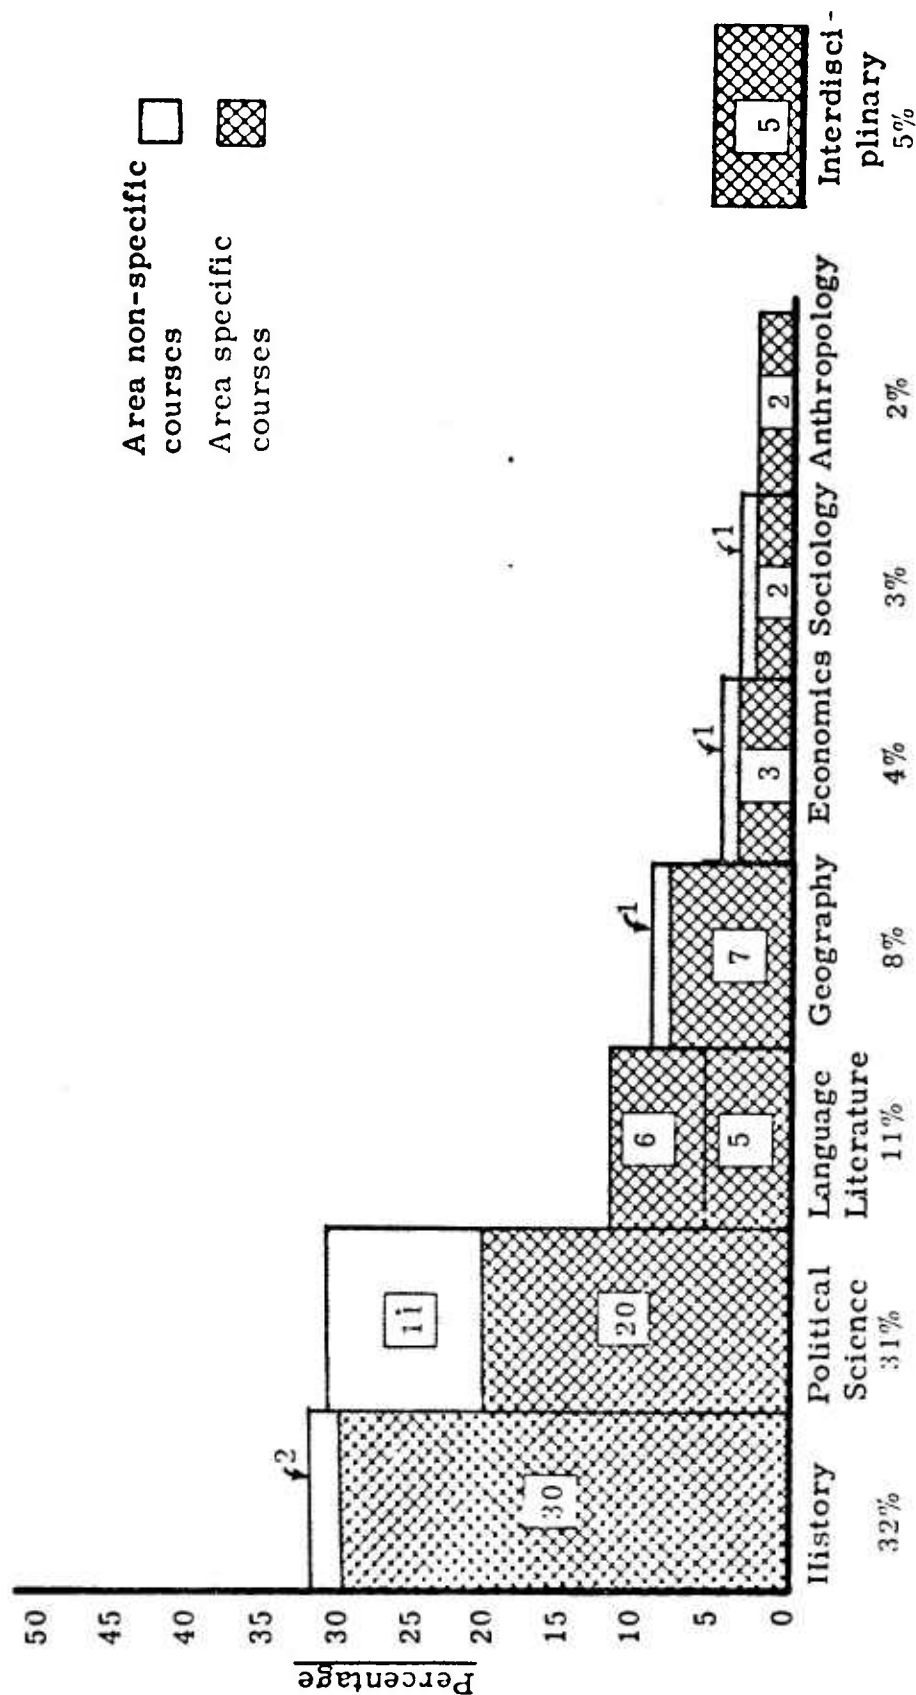

area specific level, which make it easier to comprehend and deal with societies different from our own.

Figures 3 through 9 are further indications of the lack of disciplinary spread in the coursework taken by our sample. Each of these figures indicates the percentage of time spent in selected disciplines. The percentages for each figure were obtained by dividing the total number of course hours taken in a particular discipline by the total number of hours of course work. Within each of these disciplines, further division was made according to whether the hours were in area specific courses or in area non-specific courses. Looking first at Figure 3, it can be seen that as expected the largest percentage of a student's graduate hours have been concentrated in history or political science. More specifically, 63 percent of the hours taken by all of the FASP members in our sample have been in one of the above two disciplines. At the opposite end, it can also be seen that only 2 percent of the student coursework hours have been in anthropology, only 3 percent in sociology, and only 4 percent in economics. While we do not advocate that the percentages should be equal across the board, these present inequities of disciplinary distributions are far too great. The only redeeming fact is that a majority of the courses being taken by FASP students do appear to be area specific.

Figures 4 through 9 are the same as Figure 3 except for the fact that the sample has been divided according to world areas of concentration. Comparisons of these figures indicate that the emphasis on history and political science is not a function of training for a particular area of the world. As was true for the sample as a whole, in each world area the majority of student coursework hours is being spent in history or political science. Similarly, economics, sociology, and anthropology are still at the bottom end.

Figure 3. Percentage of Time Spent by 159 FASP Trainees in Selected Disciplines

NOTE: As area specific literature courses are frequently located in language departments and utilized also as vehicles for language instruction, Language and Literature are considered in Figures 3-9 as one topic. A distinction is made, however, between time spent in courses dealing specifically with language instruction (above the line) and those concerned primarily with literature instruction (below the line).

**Figure 4. Percentage of Time Spent by 34 FASP Trainees in Selected Disciplines**  
**(Latin America only)**

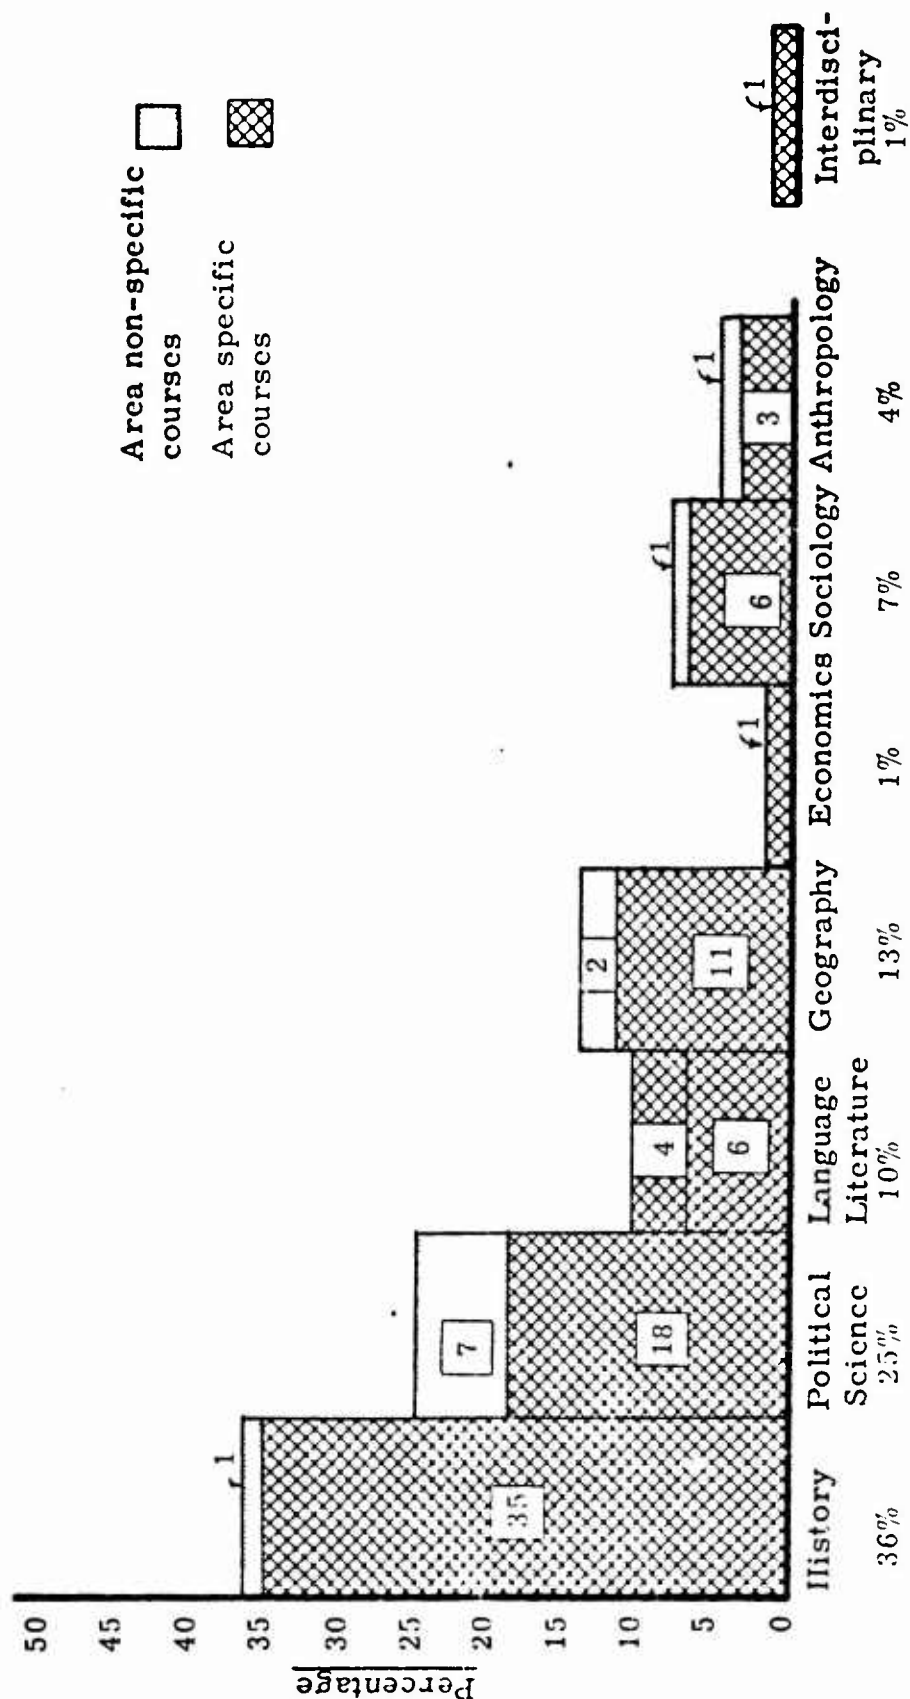

Figure 5. Percentage of Time Spent by 44 FASP Trainees in Selected Disciplines

(Oriental-Asian only)

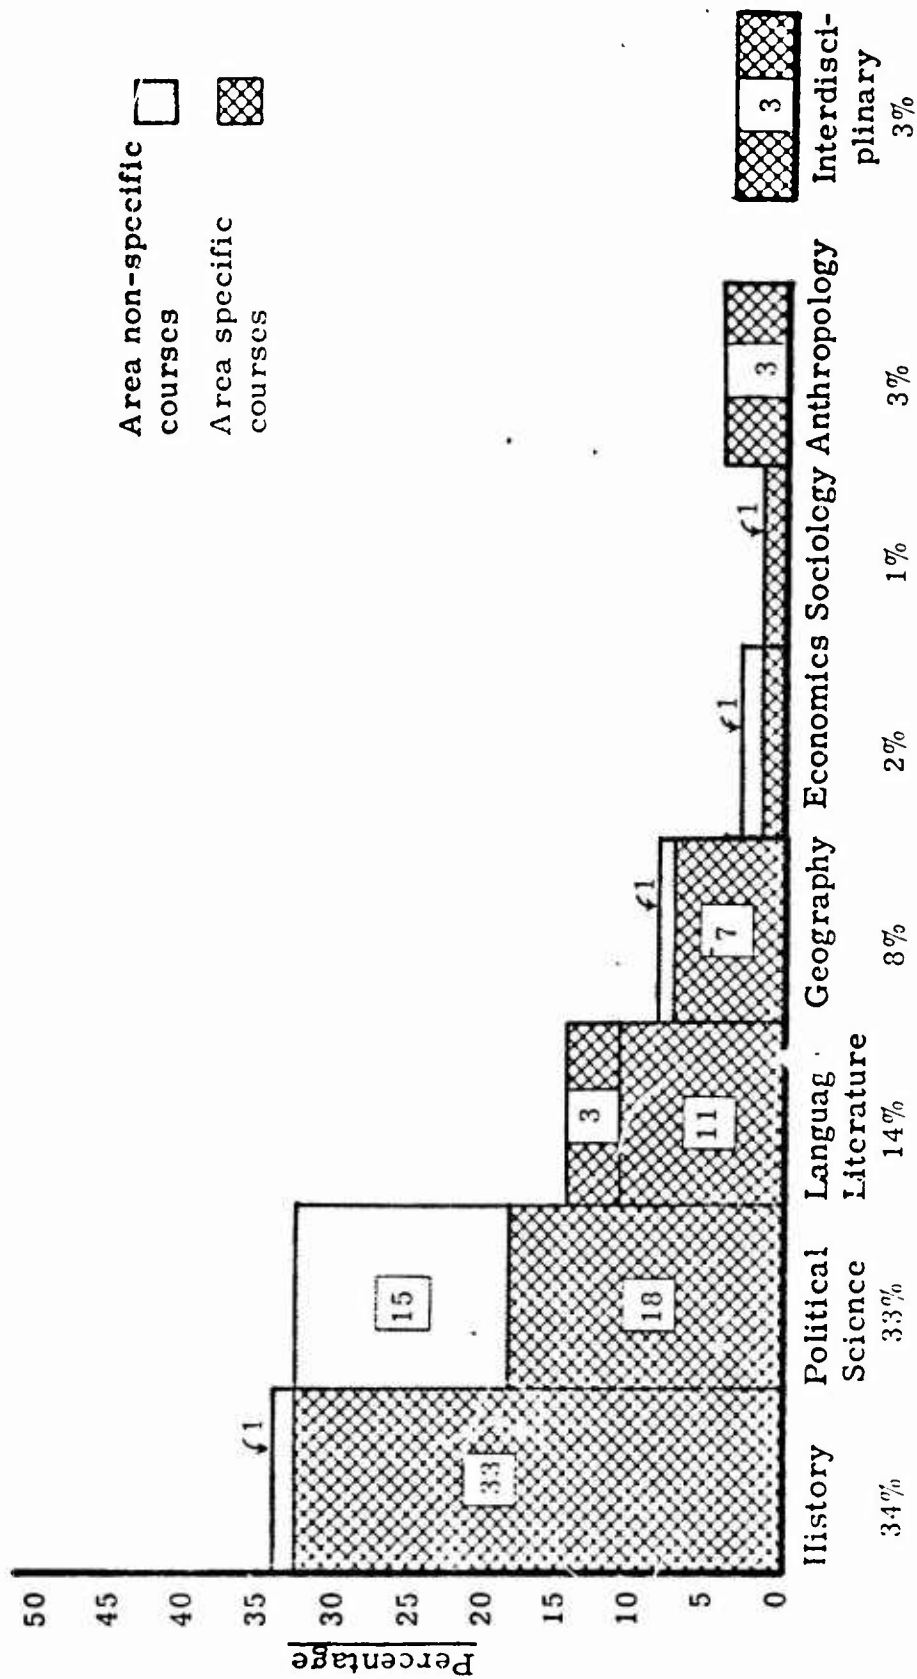

Figure 6. Percentage of Time Spent by 59 FASP Trainees in Selected Disciplines

(Slavic and Soviet only)

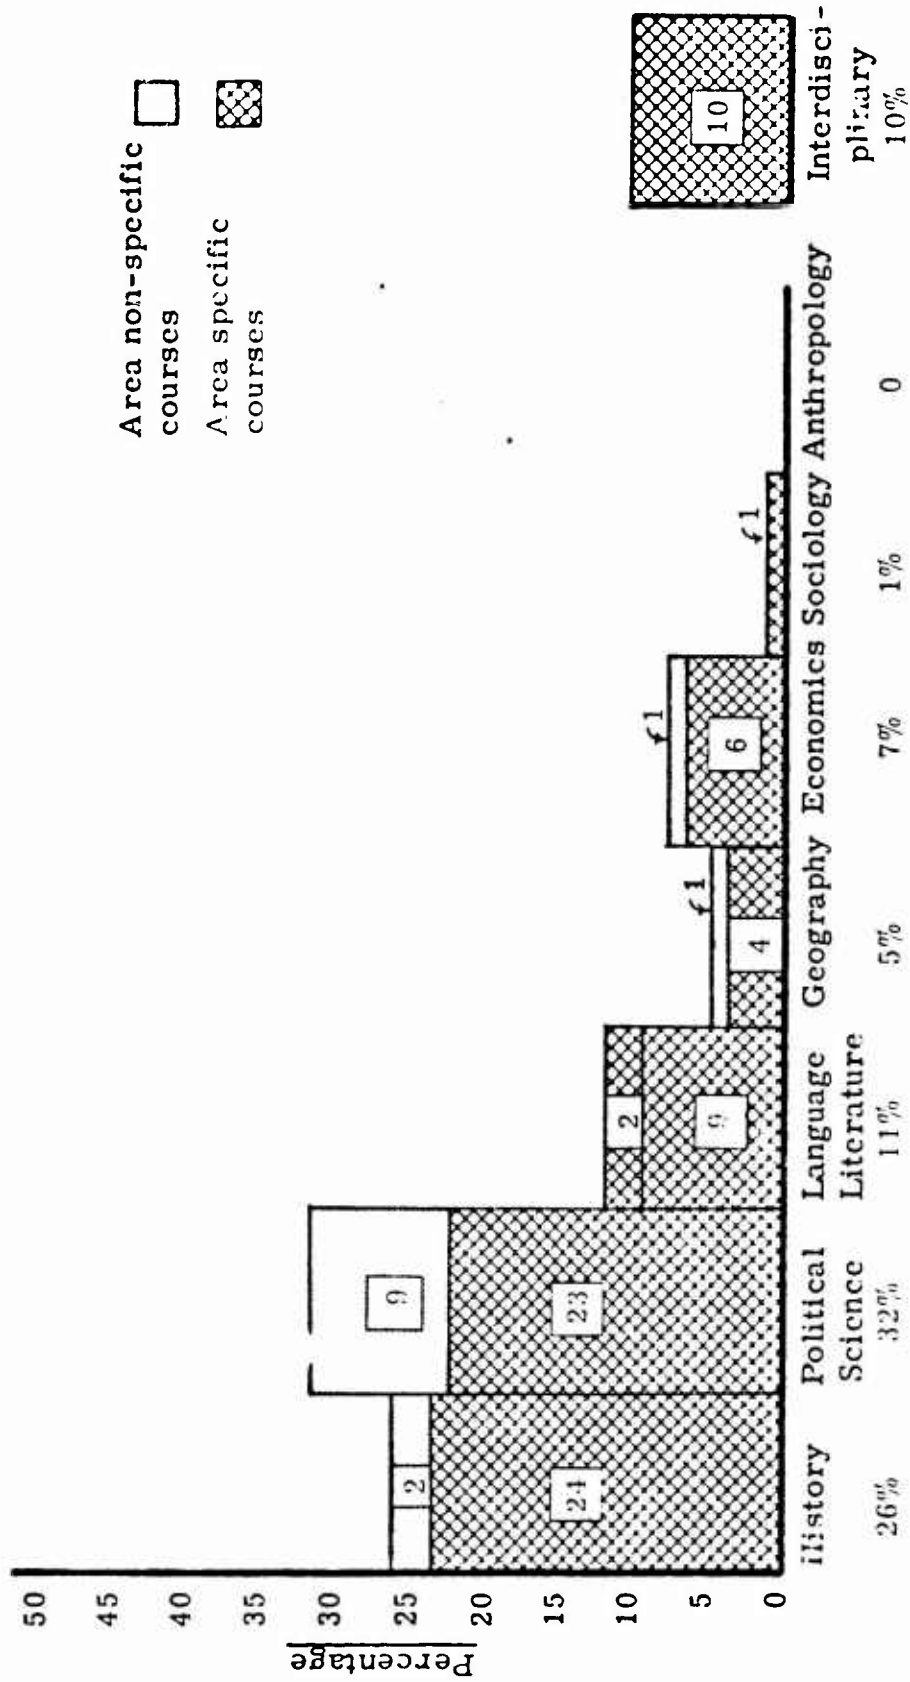

Figure 7. Percentage of Time Spent by 14 FASP Trainees in Selected Disciplines

(Western Europe only)

Figure 8. Percentage of Time Spent by 4 FASP Trainees in Selected Disciplines  
(Mid-East only)

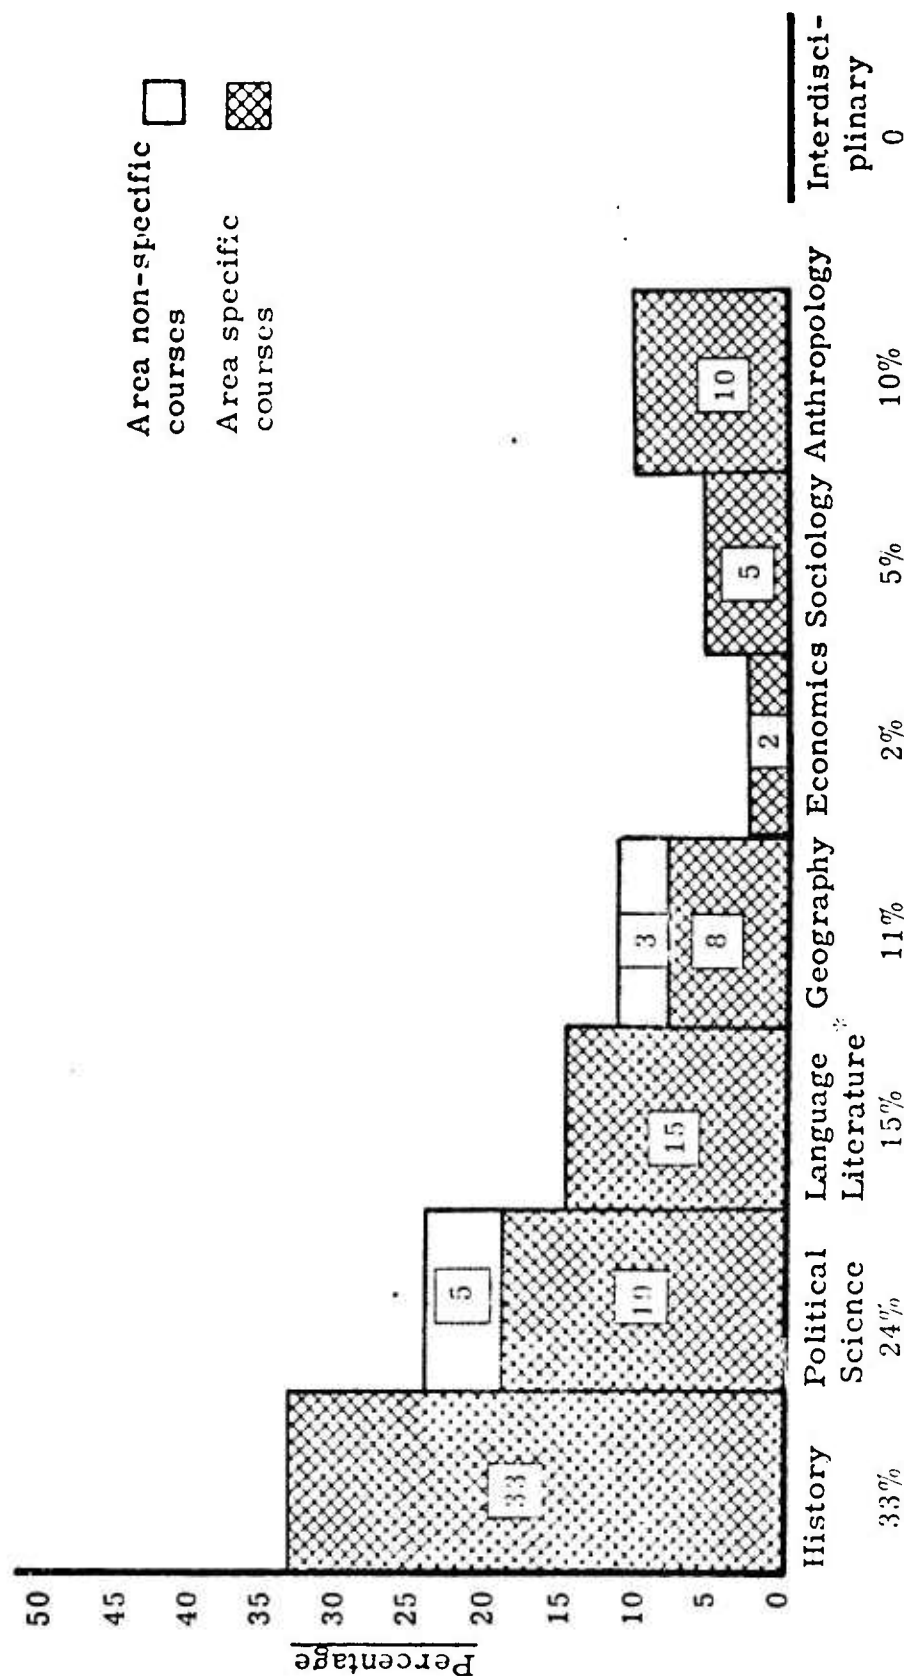

Figure 9. Percentage of Time Spent by 4 FASP Trainees in Selected Disciplines  
(Africa only)

\* Time spent entirely in courses dealing specifically with language instruction.

In the middle portions of these seven figures is found the literature and language, geography, and interdisciplinary courses. Overall, Figure 3 indicates that a reasonable amount of time is being spent in both language and literature, and geography courses. This same conclusion can be drawn from the six area specific figures for language and literature but only partially so for geography. Slavic and Soviet, Western European, and Middle Eastern FASP all appear to be spending 5 percent or less of their time in geography courses. The lesser amount of time being spent in interdisciplinary coursework is primarily a function of the general scarcity of such courses.

In summary, the general conclusion of this analysis is that FASP students have spent too much of their time in history and political science courses and not enough time in anthropology, sociology, economics, and, in some cases, geography courses. While no one explanation can be completely satisfactory, several reasons may be offered for this failure of FASP students to spread themselves more evenly over the disciplines noted.

1. It may be a function of the fact that economics, sociology, and anthropology are far less likely than the other disciplines noted to be included in area studies programs. Both interviews with area program directors and catalogue searches support this conclusion.
2. It may be a function of the tendency of the above three disciplines, as well as geography, to deal more in universals and to be area non-specific.
3. It may be a function of the technical orientation traditionally attributed to economics, and the liberal orientation traditionally attributed to sociology and anthropology.

While the above are outside the Army's control, we can suggest two additional reasons for the lack of disciplinary spread in the coursework of FASP students. The first is the failure of the FASP AR to be more direct in its assertion that area specific courses should be taken in as many disciplines as possible. An amendment to the FAO AR to correct this has been included in our recommendations.

A second and more important cause appears to lie in the "laissez faire" position taken to a great degree by the FAS Program Managers in regard to the selection of universities to which students will be sent for their graduate training. Our current impression is that there are two alternative methods for selecting the graduate school which an officer will attend.

1. The officer's preference from a list of universities and colleges preferred by OPO for training on a certain area of the world (see Tab G for the OPO list).
2. The officer's own preference not on the list. If this preference is unfamiliar to OPO, then before giving its approval it first checks with the school by phone to insure that the program in question can be completed in 12 months and that it has an adequate curriculum for training FASP students.

We say this is our current "impression" of the selection procedure because our information from OPO on this process has been somewhat variable. Until just recently, OPO has indicated that there was not a set of preferred universities, and that selection was carried out by the second procedure noted above.

Regardless of whether graduate schools have been selected from the OPO list (the basis for inclusion on which we have been unable to discover) or from officer preferences, the end results appear to indicate that the ability of programs to be completed in twelve months takes precedent over the ability of programs to provide adequate area preparation.

The basic problem with many of the schools which FASP members have been attending is that they:

1. Do not have the coursework available to adequately train an officer in an area of the world.
2. Have programs with requirements too rigorous to allow much diversification even if the coursework is available.

For example, Georgetown for the Middle East and Russia, Minnesota for Western Europe, Syracuse for Africa, and South Carolina for a number of world areas fall in the former category. The latter, on the other hand, includes many of the disciplinary programs in which FASP members have been enrolling.

Our conclusion is that the problem of course distribution could be at least partially resolved if, along with the suggested changes to the FAO AR, some method were adopted to better insure the location of FAO officers in graduate schools capable of giving them the diversified training they need. One possible method is the form presented on the following page. This form is our attempt to specify, in a minimal amount of space, the type of training available at particular graduate schools in particular programs. Each of the form's boxes is explained on the page following the form and a completed example is given at Tab H.

Relative to FAO, the type of program most desirable is one with:

1. No language prerequisites.
2. No, or optional, thesis.
3. A substantial number of area specific courses in a wide variety of disciplines.
4. Program requirements which allow for a relatively large amount of diversification.
5. Can be completed in 12 months.

# ESSENTIAL INFORMATION ON GRADUATE PROGRAM FOR FAO STUDENTS

Date Form Completed: \_\_\_\_\_

(1) UNIVERSITY NAME AND LOCATION: \_\_\_\_\_

(2) AREA OF THE WORLD TO BE STUDIED: \_\_\_\_\_

(3) LOCATION OF PROGRAM ADMINISTRATION FOR THIS AREA: \_\_\_\_\_

- 
- (9) AREA SPECIFIC GRADUATE COURSES AVAILABLE (list alphabetically by discipline, including the number of times a course is offered each year and the quarter or semester in which it is taught)

**Directions for Completing the Form,  
"Essential Information on Graduate Program for FAO Students"**

- (1) Indicate the full name of the school being discussed and the city and state in which it is located.
- (2) Indicate the area of the world for which training at this school is desired.
- (3) Indicate the area study program or disciplinary department in which one would have to enroll to study the area of the world noted in (2).
- (4)
  - (a) Indicate the lowest GRE score acceptable for admission to the program or department noted in (3). If the program or department does not require the GRE put N.A.
  - (b) Indicate the lowest grade point average for undergraduate work acceptable for admission to the program or department.
  - (c) Indicate the amount of language training, if any, required for entry into the program or department.
  - (d) Indicate any additional requirements for entry into the program or department.
- (5) Complete by checking the thesis requirement of the program or department listed in (3).
- (6) Indicate the amount of time in months normally required to complete the degree requirement for the program or department listed in (3) and the minimum number of graduate hours required (circle whether the hours are semester or quarter hours). If the thesis is optional, then this information should be filled in for both thesis and non-thesis programs.
- (7) Indicate the specific requirements of the program or department listed in (3) which must be met in order to complete a master's degree.
- (8) Indicate the official title of the degree to be received upon completion of the requirements for the program or department listed in (3).
- (9) Indicate alphabetically by department all the area specific courses available at the graduate level for the area of the world listed in (2). For each course include the number of times a year it is offered and the quarter or semester in which it is taught.

Our limited experience suggests that in the case of "area studies" programs, the language requirement may be the hardest to escape. All area programs which we have encountered have either required language training prior to admittance to the program or as part of the training (in which case the time requirements were usually greater than 12 months). The problem under FAO is that language training is scheduled to come after graduate school. This placement was apparently prompted by the belief that the loss in proficiency was too great when language training came too early in the program of study. We believe that the Army should carefully weigh whether the loss in regainable proficiency is worse than the elimination of what are undoubtedly some of the better area programs (e. g. , Kansas for Slavic and Soviet Area Studies and Hawaii for Asian Studies). If not, then it may be beneficial to make the order of language training flexible, and so specified in the AR, so that those needing it prior to graduate school can get it.

Returning to the form itself, there are several potential means by which it might be completed.

1. By appropriate university officials such as area program directors and disciplinary heads.
2. By OPO personnel through an examination of catalogues, telephone calls, and possibly even personal visits to schools of concern.
3. By FASP members on the schools they wish to attend.

While it would be easiest on OPO if either university personnel or FAO students completed these forms, the greatest continuity of results would come from OPO doing it. As it would obviously not be possible to complete this form for every graduate school in the United States some sort of sample would have to be chosen (this would also be true if university officials were used to complete forms). The OPO list given at Tab G is

one possible sample. Alone, however, it is too short to give a fair indication of the range of programs available for different areas of the world. Consequently, we have included at Tab I and Tab J two lists from which a selection might be made.

1. The list at Tab I is that of the 106 language and area programs being funded by the National Defense Education Act (NDEA) for 1972-73. While somewhat political, the funding of these programs is also competitive on the basis of "quality." (Despite this we would not recommend that this list be used for selecting programs for FAO students without first completing our suggested form. While their quality may be high their breadth and depth may be narrow.) Yearly information on what programs are being funded (as well as more general information on area programs) is available from Dr. Robert Suggs at the address given in Tab H.
2. The list of schools at Tab J is from an unpublished study done for HEW. This is a relatively complete list of 620 area programs at 307 colleges and universities. While some of these schools do not have graduate programs they can easily be eliminated.

In concluding, it should be noted that the utilization of this form would not result in the diminution of the variability of training which FASP administrators indicated during our interviews they feel is important. It will only help insure that the various graduate schools to which FAO members are sent are more likely to be capable of giving the officers a well-rounded area education. If the decision is made not to use this form, then we recommend that, where possible, students be sent to graduate schools having separate "area programs." While this alone does not guarantee a broad area education, it does appear to increase the probability of it. Well organized area programs are not only more likely to offer a relatively large

number of area specific courses in different disciplines but they are also more likely to give the student the flexibility needed to take advantage of this availability.

### Graduate Training Inequities and FAO C&SC

Even if the changes we have suggested are instigated, it is still unlikely that the inequities noted in graduate training will be completely corrected for all students in the immediate future. Some FAO students will still undoubtedly remain deficient in courses in economics, sociology, anthropology, and possibly even geography. Given this, we suggest that FAO C&SC be utilized to help reverse, to the extent possible, such deficiencies as might occur. If the suggestion for the Electives Annex is accepted, this could easily be done by requiring deficient students to take courses in these subjects in the Graduate College Elective. If needed courses were not available, then an independent study program could be developed for the student. This would be work in addition to that normally required of the C&SC student.

### Career Development

For all intents and purposes, the subject of career development is discussed at only two points in each of the MAOP, FASP, and FAO ARs. The first point in each notes that the program does provide a path for career development while the second notes the means by which development is to be accomplished. The statements are similar in each of the ARs and all are very general in nature.

1. MAOP: This program will permit officers, as the result of education, experience, demonstrated performance, and ability, to advance progressively to MAOP positions at the highest levels of responsibility. (1-1)

Development of each officer will be accomplished through increasingly important branch material staff and command assignments, alternating with schooling and MAOP assignments, and continuing self-development to keep abreast of changes in MAO and related fields. (1-3)

2. FASP: This program provides a special career field for officers which will permit them, as the result of education, experience, demonstrated performance, and ability to advance progressively to FAS positions at the highest level of responsibility. (1-1)

Subsequent development of each officer will be accomplished through increasingly important branch material command and staff assignments. After an initial utilization assignment, FAS utilization tours will alternate with basic branch qualifying assignments within the framework of branch career patterns. (1-5)

3. FAO: This program will permit qualified officers to advance progressively to FAO positions at the highest levels of responsibility. (1-1)

Subsequent development of each officer will be accomplished through increasingly important branch material command and staff and FAO assignments. Following an initial utilization assignment, FAO utilization tours will alternate with basic branch qualifying assignments within the framework of branch career patterns. (2-4)

While these statements are very general, it is doubtful that more could be said without going into excessive detail. The FAO AR does attempt to go one step further by illustrating in a Figure the program career pattern. Relative to career development, however, the problem of specialists, such as MAOP, FASP, and FAO members, has not been in the presence or absence of AR directives but has been in the traditional branch orientation of the Army.

As in other bureaucratic organizations, career development for Army officers involves movement from lesser to more important positions of responsibility and from lesser to higher ranks. The problem for special career program members is that promotion in the Army has and still does result from branch assignments, particularly command assignments. In theory, this is not a problem for the ARs state that "utilization tours will alternate with basic branch qualifying assignments (FAO AR, 2-5)" and that "officers participating in the program will receive equal consideration with their contemporaries for appropriate command assignments and for attendance at service schools and colleges (FAO AR, 2-5)." In practice, however, it is apparent that things have not worked out so perfectly.

The training and utilization tours of members of special career programs often make them non-competitive for better branch assignments or for the more prestigious Army schools, both of which are normally needed for advancement to higher Army rank. Undoubtedly, the decreased probability of Army promotion has deterred many capable officers from considering membership in the MAO and FAS Programs, and unless things change, this will undoubtedly continue to be true also for the FAO Program.

Part of the problem could probably be eliminated through the guidance of program members in methods of how to decrease the probability that they will miss any of the prerequisites for promotion. In our feedback study, we will try to determine what, if any, guidance FASP and MAOP members have received in this regard. The greatest potential solution to the problem, however, lies in the new Officer Personnel Management System (OPMS) concept. If and when this is instituted, every officer in the Army will have a second specialty in addition to his branch specialty. Most

importantly, though, OPMS will allow for career advancement along two independent axes--one in an officer's branch and one in his specialty. If this system goes into effect special career programs, such as FAO, should then find it easier to attract officers of a high calibre for they will know that by joining the program they will not retard the advancement of their Army career.

### Conclusions

1. As a result of our investigation of MAO C&SC, both through an analysis of the POI for the course and through interviews with MAO C&SC administrators and instructors, a number of suggestions for change under FAO were made. These suggestions are presented in the recommendations.
2. There is minimal duplication of material presented in MAO C&SC and in the Core and Advanced Security Assistance instruction of C&GSC. Consequently:
  - a. Utilization of C&GSC as an alternative to FAO C&SC would be possible only with massive additions to the C&GSC curricula.
  - b. Elimination of more than just a few of the topics presently covered in MAO C&SC is precluded. Even here, care would have to be taken to insure that where a topic is eliminated the continuity of that FAO Annex is not disrupted.
  - c. C&GSC might best be used to shorten the FAO training time by letting FAO members take the core curriculum of C&GSC but substitute FAO C&SC for the electives half of C&GSC.
3. There is a lack of disciplinary spread in the graduate coursework being taken by FASP students. While most of the work appears to be in area specific courses, it also tends to be concentrated in the disciplines of history and political science. Little coursework is being taken in the disciplines of anthropology, sociology, economics, and in some cases, geography. This lack of spread can be attributed to at least two causes.
  - a. The lack of guidance in the FASP AR regarding the need for area specific courses to be taken in a wide variety of disciplines.

- b. The lack of stronger guidance in the selection of graduate schools. This lack of strong guidance has resulted in students either being enrolled in schools with inadequate coursework available for well-rounded area training, or enrolled in schools with sufficient coursework but with programs too rigorous in requirements for advantage to be taken of it.

We conclude both that the FAO AR should be amended and that some method should be adopted for placing FAO officers in graduate schools capable of giving them the diversified training that they need on an area of the world.

### Recommendations

1. A general course on the functions of attaches should be added to the FAO C&SC curricula in the Security Assistance Annex.\*
2. A course on the roles and functions of the military advisor should be added to the Security Assistance Annex of the FAO C&SC.
3. Under the assumption that the FAO training specified in AR 614-142 will be implemented and generally applied, the 36 hour Area Orientation course at the MAO C&SC should be eliminated in the FAO C&SC.
4. Under the assumption that the FAO training specified in AR 614-142 will be implemented and generally applied, the Electives Annex of MAO C&SC should be eliminated under FAO as a normal requirement for students. We recommend that it be utilized primarily for those students who are deficient in some aspect of training generally not offered in the C&SC, and for those students who desire to pursue some additional training for their own benefit (e. g. for advanced degrees).
5. Under the assumption (which may or may not prove true) that all FAO members will be competitive for C&GSC the possibility of substituting FAO C&SC for the electives portion of that course should be thoroughly investigated.

---

\* Prior to the publication of this report such a general orientation course on the functions of attaches was added to the FAO C&SC curricula. We highly commend this action.

6. We recommend that the FAO AR be amended on p. 2-4. We propose that the sentence on this page beginning "The program of instruction..." be rewritten to read: "For officers enrolled in both area studies and academic disciplines, the program of instruction will include, to the extent possible, subjects pertaining to the geography, history, economics, politics, and sociology of the country or area of study as well as appropriate subjects required by the school's graduate degree program." The purpose of this recommendation is to increase the probability that both FAO officers enrolled in area studies and disciplinary programs will recognize the need for area specific courses to be taken in a wide variety of disciplines.
7. We recommend that the form "Essential Information on Graduate Program for FAO Students" shown on pages 32-33 be adopted to better insure the location of FAO officers in graduate schools capable of giving them the diversified training that they need on an area of the world. This form, when properly completed, should indicate to OPO personnel the quality of the training (relative to FAO needs) available at particular graduate schools in particular programs. We suggest that the type of program most amenable to FAO needs is one with no language pre-requisites, no thesis or optional thesis, a substantial number of area specific courses in a wide variety of disciplines, program requirements which allow for a relatively large amount of diversification, and can be completed in twelve months.
8. If the decision is made not to use this form, then we recommend that, where possible, students be sent to graduate schools having separate "area programs." Well organized area programs are not only more likely to offer a relatively large number of area specific courses in different disciplines but they are also more likely to give the student the flexibility needed to take advantage of this availability.
9. Even if the changes we have suggested are instigated, it is still unlikely that inequities noted in graduate training will be completely corrected for all students in the immediate future. Consequently, we recommend that FAO C&SC be utilized to help reverse, to the extent possible, such deficiencies as might occur. If the suggestion for the Electives Annex is accepted, this could easily be done by requiring deficient students to take courses in these subjects in the Graduate College Elective. If needed courses were not available, then an independent study program could be developed for the student. This would be work in addition to that normally required of the C&SC student.

10. The fact that language training is scheduled to come after graduate school in FAO and the fact that most "area studies" programs either require language training prior to admittance to the program or as part of the training (in which case the time requirements are usually greater than twelve months) leads us to recommend that the Army carefully weigh whether the loss in regainable language proficiency is worse than the elimination of what are undoubtedly some of the better area programs (e.g. Kansas for Slavic and Soviet Area Studies, and Hawaii for Asian Studies). If not, then it may be beneficial to make the order of language training flexible, and so specified in the FAO AR, so that those needing it prior to graduate school can obtain it.

**SUGGESTIONS FOR CHANGE IN IN-COUNTRY TRAINING  
GATHERED FROM FASP IN-COUNTRY TRAINING REPORTS**

SUGGESTIONS FOR CHANGE IN IN-COUNTRY  
TRAINING GATHERED FROM FASP  
IN-COUNTRY TRAINING REPORTS

Task III originally read: "Survey the job experiences and insights of FASP and MAOP members as revealed in their documented job experiences." Interviews with personnel at ODCSOPS, ACSI, and MAO C&SC disclosed that there were no usable documented job experiences from either FASP or MAOP members. We did find in ACSI a file of in-country training reports for a number of FASP officers. We analyzed a sample of these which were drawn by ACSI from various regional commands as representing some of the better examples of reporting. We also interviewed a handful of FASP members on an informal basis during the process of this study.

While there were not enough reports (12) to allow for generalizations, they did suggest some issues for investigation regarding the structure of in-country training. Among these are the appropriate length for the in-country training tour, and the types of trips, contacts and training to be undertaken in-country. While it is impossible to address these and other issues of in-country training in this report, this will be done in our follow-on study which is concerned with the development of a feedback system for the FAO program. Both questionnaires and interviews will be used to obtain information regarding the in-country training experience of the majority of FASP members.

TAB A

A COMPARISON OF FAO ELIGIBILITY AND  
TRAINING REQUIREMENTS WITH THOSE OF THE  
MAO AND FAS PROGRAMS

## TAB A

### A COMPARISON OF FAO ELIGIBILITY AND TRAINING REQUIREMENTS WITH THOSE OF THE MAO AND FAS PROGRAMS

#### 1. Eligibility Requirements

According to AR 614-142, officers on active duty who meet the following criteria are eligible to participate in the FAO Program.

- 1.1 "Assigned to a branch other than Chaplains, Army Medical Department, or Judge Advocate Generals Corps."

While this requirement reads the same in the most recent FASP AR, it represents a narrowing from the MAOP AR of officers eligible to participate in the program. In MAOP, members of the above branches were eligible for the program with the approval of their respective branch chiefs.

- 1.2 "Serving in the grade of captain through colonel."

In FASP, colonels were not eligible for the program, while in MAOP they were. Consequently, the eligibility of colonels represents a broadening of what was the potential FASP membership.

- 1.3 "Have a minimum of three years basic branch duty to include duty with troops. (Troop duty for officers of the technical and administrative services may include either detail with combat arms or duty with troop units of the appropriate technical or administrative service.)"

This requirement comes verbatim from the FASP AR and is not found at all in the MAOP AR.

- 1.4 "Possess the following educational background which may be waived by the COPO in clearly justifiable cases:
- a. Military schooling appropriate to grade and length of service. (Captains who have completed or are in attendance at an appropriate Branch Advanced Course may apply for the program.

- b. Possess a baccalaureate degree preferably in a social science or related discipline from an accredited college or university to include the military academies; and demonstrated an academic proficiency suitable for graduate study at an accredited university."

While the wording is somewhat changed, the military schooling requirement for FAO eligibility is the same as it was in both MAOP and FASP. The sentence beginning with "Captains" is from MAOP and is not found spelled out in FASP. The MAOP requirement that Field Grade Officers have attended Command and General Staff College has been deleted in the new FAO AR.

Both FASP and MAOP required that those who apply have at least a bachelors degree. Whereas FASP did not express a preference for type of degree the MAOP preference for a degree in the social sciences has been carried over into the FAO AR. In addition, "related disciplines" have been spelled out specifically in the new FAO AR (see Tab D for a listing of these). "To include the military academies" and "demonstrated an academic proficiency suitable for graduate study at an accredited university" is not found in either the MAOP or FASP AR. The closest thing to the latter is found in the old FASP requirement that an officer should have "demonstrated a high level of academic performance." In MAOP it was possible for officers without degrees to apply if they had received appropriate related training or had had some qualifying politico-military experience. This has not been specifically carried over to FAO. However, it is possible that such person might be granted a waiver.

- 1.5 "Demonstrated a high level of intelligence, initiative, imagination, judgment, and the potential for advancement to positions of great responsibility.

Although the FASP AR also contains a statement designed to indicate that only officers of the highest calibre would be considered for the program, the above statement comes, with only slight modification, from the MAOP AR.

- 1.6 "For lieutenant colonels and colonels, have previously been assigned to politico-military or security assistance duties which can be waived in justifiable cases."

This eligibility requirement is not found in FASP but comes with only a minor modification from the MAOP AR. Whereas the latter indicated that a previous assignment for field grade officers in the politico-military field was desirable, the new FAO AR seems to have replaced this implicitly with "necessary" except where waived in certain justifiable cases.

- 1.7 Attained a minimum score of 22 on the Defense Language Aptitude Test for foreign language training, or have a foreign language proficiency at the S3/R3 level. (This requirement may be waived in clearly justifiable cases).

"Attained a minimum score of 22 on the Defense Language Aptitude Test" comes from the FASP AR. Previously, this statement continued with "or must be enrolled in or have successfully completed a course at the Defense Language Institute in the language of or related to the area in which training is requested." This latter option found in the FASP AR has been replaced by a MAOP alternative that the applicant have a language proficiency at the R3/S3 level.

- 1.8 "Be a U. S. citizen by birth. (This prerequisite may be waived on an individual basis by the CO USAIC.) Members of an applicant's immediate family, including spouse, if married, parents, foster parents, step parents, brothers, sisters, and children must be U. S. citizens though not necessarily by birth. Foreign born family members must have been U. S. citizens for at least five years.

Applicant and spouse, if married, should have no near relatives or persons to whom they may be bound by ties of affection, kinship, or obligation residing in a country within whose boundaries physical or mental coercion is known to be common practice, either against persons accused of acting in the interest of the United States or against relatives of such persons. Further, applicant and spouse will have neither commercial nor vested interests in such a country. For purposes of this regulation, near relatives will include father, mother, brother, sister, daughter, son, uncle, aunt, grandparent, father-in-law, mother-in-law, step-relations corresponding to any of the above, and persons acting in loco parentis."

The FAO citizenship requirements for program eligibility come directly from FASP. The only MAOP requirement was that the applicant be a U. S. citizen.

- 1.9 "Be free of marital difficulty and from abnormal family ties or business complications which might divert attention from military duty. Foreign financial interests, foreign investments and continual excessive personal indebtedness are possible causes for disqualifications. "

This eligibility requirement is not found in the MAOP AR and with but one change comes directly from FASP. The change is that the statement "Sound healthy family relationships are important attributes of foreign area specialists" has been left out.

- 1.10 "Have no information on file (personal or medical) which, in the opinion of the CO USAIC would prevent the granting of a security clearance. Officers who are not presently members of the FASP program will be required to undergo a background investigation. If any member is found not to be qualified for assignments to positions requiring a TOP SECRET clearance or Code Word Project Clearance, as appropriate, membership in the FAO program will be terminated. "

This eligibility requirement is not found in MAOP but comes from the FASP AR. While the wording is slightly modified from that found in FASP the requirement itself is unchanged.

- 1.11 "Indicate a desire to participate in the program. "

This is not in FASP but comes directly from MAOP.

- 1.12 "Accepted for retention on active duty under the provision of AR 135-215 (for reserve component officers only). "

This comes directly from the FASP eligibility requirements.

- 1.13 "Agree to complete the prescribed training, and upon completion thereof have at least four years active duty service remaining. Students incur the service obligation upon entry into any single phase of the training program in accordance with AR 621-1. "

With only inconsequential word changes, this comes from the FASP AR. In the MAOP AR it says only that upon joining the program an officer must "have at least three years of active service remaining. "

1. 14 "Uncommitted to another Army Officer Special Career Program. "

This is found in both the MAOP and FASP eligibility requirements except that in the former officers in Army Aviation are allowed to apply.

In addition, two FASP eligibility requirements--one that officers "Have served not more than 12 years of active Federal Commissioned Service on the date of entry into training for which selected, " and the other that they "Not have passed their 37th birthday prior to the date of entry into training"--are now included in the application procedures as dates before which officers should apply. While in FASP officers beyond these dates would have to get a waiver before they could apply, in FAO these are only suggested dates before which application should be made.

2. Training Requirements

According to AR 614-142, FAO training will consist of the following:

2.1 Academic

- a. Civil. This advanced degree training (12 months) in area studies or in another appropriate FAO program discipline is provided at selected universities in the United States or overseas. The program of instruction includes subjects pertaining to the geography, history, economics, politics, and sociology of the country or area of study and appropriate subjects required by the school's graduate degree program. This phase of training may be omitted for personnel possessing an appropriate graduate degree from the academic discipline list (see Tab D). Officers who have acquired a graduate degree at government expense, under the cooperative degree or the degree completion program (Boot Strap) will not be permitted to pursue another degree. The areas in which training is offered and the content and sequence of instruction may be revised as necessary to meet the current requirements, university training loads, and budgetary limitations.
- b. Military. This training consists of attendance at the six months' Foreign Area Officer Command and Staff Course at the Institute for Military Assistance, Ft. Bragg, N. C., and attendance at other selected military schools needed to meet specific requirements.

The requirement for a graduate degree comes entirely out of the FAS Program. While considered an "integral" part of the MAO Program, graduate school was not an assigned part of the MAO training. Qualified officers not possessing advanced degrees were only encouraged to apply to their respective career branches for graduate training. The major change in the new civil training requirement is that the advanced degree may now be taken not only in area studies but "in another appropriate FAO Program discipline." This change reflects the inclusion of positions in FAO which are validated for graduate degrees other than area studies. Most of these are former MAOP positions.

FAO military training, FAO C&SC, is the core of what was MAOP training; i. e., the MAO C&SC. A similar requirement was not part of the FASP training.

- 2.2 Language. This phase of training consists of six to twelve months of language instruction normally conducted at the Defense Language Institute (DLI). Training is conducted at civilian institutions in languages not taught at DLI. This phase of training may be omitted for personnel currently proficient (S3/R3) in the appropriate language, verified by current Defense Language Proficiency Test (DLPT) scores.

Language training is taken directly from the FASP training requirements. Similar to graduate school, while language is viewed as an integral part of the MAO Program, no training is provided those not proficient in a language.

- 2.3 Overseas. In-country training consists of travel, research, and study in the overseas area of specialization; 30 months for the Arab world (Master's Degree and in-country); 24 months for Russia in a controlled environmental community in West Germany; 24 months for China of which 12 months consists of training at the American Embassy School of Chinese Language and Area Studies at Taichung, Taiwan. All other areas are normally 12 months duration except in those cases where a FAS member attends a host country Command and General Staff College level or higher school which is 6 months duration or longer. In this case, in-country training will be extended to eighteen months. During this phase of training, a FAO works directly under supervision of a military officer and receives an

efficiency report in lieu of an academic report. In-country training may be delayed if in-country personnel restrictions preclude the assignment of additional FAOs. In-country training may be waived if an individual has served a tour of duty in his area of concentration for a minimum of 12 months which satisfies the FAO training requirement.

With only a minimal of modification in language, this is entirely a FASP training requirement. The inclusion of a statement about possible delay reflects the size increase expected with the merger of FASP and MAOP. Some countries as well as some of our ambassadors put a restriction on the number of student military personnel who can be in-country at any one time.

## INSURGENCY

6 Hours \*

The purpose of this subject is to enable the student to identify the elements of and evaluate the overall threat of an insurgency in any society.

- |      |                   |  |
|------|-------------------|--|
| (2)  | <u>5 minutes</u>  | Introduction to Insurgency.  |
| (3)  | <u>15 minutes</u> | Instructor-led discussion of the development of vulnerabilities within a society and the insurgent leadership's exploitation thereof.  |
| (4)  | <u>15 minutes</u> | Instructor-led discussion of the role of ideology in the development of an insurgency and the causes of violence within a society.   |
| (5)  | <u>40 minutes</u> | Instructor-led discussion of insurgent organization and Communist organizational patterns.   |
| (6)  | <u>10 minutes</u> | Instructor-led discussion of general attitudes of Communist powers toward insurgency as an instrument of international policy.   |
| (7)  | <u>5 minutes</u>  | Instructor-led discussion of Urban Insurgency.   |
| (8)  | <u>10 minutes</u> | Instructor-led discussion of the techniques insurgents may utilize to exert influence over the populace.   |
| (9)  | <u>10 minutes</u> | Instructor-led discussion of proposed guide to analysis of an insurgency.  |
| (10) | <u>3 minutes</u>  | Introduction to P. E. P. E. is that student is placed in the position of a communist insurgent and offered the opportunity to determine how he would initiate and organize an insurgency in Venezuela as that society looked to the outsider in the early 1960s. |
| (11) | <u>12 minutes</u> | Subwork group discussion.  |
| (12) | <u>45 minutes</u> | Class discussion of student proposals.   |
| (13) | <u>10 minutes</u> | Summary.   |

\* As the first topic covered in Course 7, Security Assistance, one-half hour of the 6 hours is an "Introduction to and Analysis of Course 7." This introduction notes that the major objective of this course is to prepare the student to serve as a military assistance advisor (less language and area training).

## PREVENTION OF INSURGENT WAR

6 Hours

The purpose of this subject is to introduce and develop the concept of anticipating, forestalling and obviating insurgency in the developing countries. It defines the terms internal development and internal defense in discussing remedial measures to mitigate conditions which tend to fuel insurgency as well as suppressive measures to subdue active insurgent organizations. It discusses factors which affect the establishment of national goals, policies, and programs to promote internal security and national development and reviews examples of policies used by the government of Venezuela in preventing its overthrow by insurgents in the 1960s.

- |      |                   |   |
|------|-------------------|---|
| (1)  | <u>5 minutes</u>  | Introduction  |
| (2)  | <u>5 minutes</u>  | Discussion of student questions on homework.                                      |
| (3)  | <u>20 minutes</u> | Discussion of historical example of prevention of insurgent war--Korea.           |
| (4)  | <u>5 minutes</u>  | Introduction to practical exercise: Response to an insurgent threat in Venezuela. |
| (5)  | <u>60 minutes</u> | Subwork group discussion of first requirement.                                    |
| (6)  | <u>5 minutes</u>  | Summary of Lesson 1.  |
| (7)  | <u>5 minutes</u>  | Introduction to Lesson 2.   |
| (8)  | <u>15 minutes</u> | Subwork group discussion of first requirement, Lesson 1.                          |
| (9)  | <u>30 minutes</u> | Subwork group presentation and class discussion of first requirement.             |
| (10) | <u>25 minutes</u> | Instructor presentation of U. S. Army Internal Development and Defense Doctrine.  |
| (11) | <u>20 minutes</u> | Instructor presentation of a causal model of civil and political violence.        |
| (12) | <u>5 minutes</u>  | Discussion of home study assignment.  |

- (13)    35 minutes    Introduction and analysis of home study assignment--  
Assignment is to read a specific chapter from Charles  
Wolf's book, U. S. Policy and the Third World.  
Students are to prepare in light of this chapter and  
what they have learned from the course so far a  
ten-minute paper on the proper role of security forces  
to suppress an insurgent operation.
- (14)    30 minutes    Comparison of Left and Maoist strategies.
- (15)    25 minutes    Strategy for prevention of insurgent war.
- (16)    10 minutes    Summary.

## PSYCHOLOGICAL OPERATIONS

4 Hours

The purpose of this subject is to improve the student's understanding of PSYOP as another asset available to the commander to assist him in the accomplishment of his assigned mission. PSYOP are effective in all types of warfare and can substantially aid the commander in the accomplishment of his mission. In the past PSYOP has not been effectively employed in most cases because of a lack of understanding.

- |      |                   |   |
|------|-------------------|---|
| (1)  | <u>5 minutes</u>  | Introduction.   |
| (2)  | <u>10 minutes</u> | Answers to questions on homework.   |
| (3)  | <u>5 minutes</u>  | Methodology and introduction to student requirement-- requirement is that each work group analyze selected articles concerning the current U. S. attitude towards PSYOP; employment of PSYOP during conventional conflicts; employment of PSYOP in Nation Building efforts and PSYOP-related activities and actions which impact on successful PSYOP. They are then to prepare a fifteen minute briefing for the class. |
| (4)  | <u>30 minutes</u> | Student work group discussion.  |
| (5)  | <u>40 minutes</u> | Student work group discussion continued.  |
| (6)  | <u>15 minutes</u> | Work Group A presentation--Current Philosophy Toward PSYOP.   |
| (7)  | <u>10 minutes</u> | Critique/discussion Work Group A presentation.  |
| (8)  | <u>15 minutes</u> | Work Group B presentation--PSYOP in Conventional Warfare.   |
| (9)  | <u>10 minutes</u> | Critique/discussion Work Group B presentation.  |
| ( 0) | <u>15 minutes</u> | Work Group C presentation--PSYOP in Nation Building.  |
| (11) | <u>10 minutes</u> | Critique/discussion Work Group C presentation.  |
| (12) | <u>15 minutes</u> | Work Group D presentation--PSYOP Related Activities and Actions.  |
| (13) | <u>10 minutes</u> | Critique/discussion Work Group D presentation and Summary.  |

## INTERNAL DEFENSE OPERATIONS

8 Hours

The purpose of this subject is to introduce the student to the concept of internal defense in developing countries--the state of creating and maintaining an atmosphere of law and order wherein internal development can occur. It stresses the importance of planning, coordination and employment of security forces in populace and resources control (PRC), tactical operations and other supporting operations at national and subnational levels. The interrelationship of Intelligence Operations, PSYOP, Civil Affairs Operations, PRC Operations and Tactical Operations is developed. Examples used in Malaya and Vietnam are reviewed.

- |      |                   |  |
|------|-------------------|--|
| (1)  | <u>7 minutes</u>  | Introduction to subject.   |
| (2)  | <u>83 minutes</u> | Discussion of Malayan Case Study.  |
| (3)  | <u>15 minutes</u> | Question and Answer period on the Malayan Emergency.   |
| (4)  | <u>5 minutes</u>  | Summary.   |
| (5)  | <u>15 minutes</u> | Introduction to Lesson 2 and ID Planning.  |
| (6)  | <u>30 minutes</u> | Discuss Civil Affairs/Intelligence/PSYOP Operations.   |
| (7)  | <u>20 minutes</u> | Discuss Populace and Resource Control Operations.  |
| (8)  | <u>10 minutes</u> | Introduce and play LTC Mier's Tape.  |
| (9)  | <u>15 minutes</u> | Discuss Tactical Operations.   |
| (10) | <u>25 minutes</u> | Introduce/Show Film "How to Fight a Guerrilla War."  |
| (11) | <u>5 minutes</u>  | Introduction to 1st Requirement--This requirement is a subwork group discussion of a British seminar report on <u>Lessons From the Vietnam War</u> . |
| (12) | <u>20 minutes</u> | Student work period--1st requirement.  |
| (13) | <u>55 minutes</u> | Class discussion--1st requirement  |
| (14) | <u>5 minutes</u>  | Summary and Preparation for Lesson 3.  |

- (15)    10 minutes    Introduction to Lesson 3 and 1st requirement--This requirement is to develop a consolidation campaign outline plan for Sardino District in San Marcello Province located in the fictitious country of Belle Terre.
- (16)    40 minutes    Student work period.
- (17)    30 minutes    Subwork Group Presentation--1st requirement.
- (18)    10 minutes    Instructor critique/College solution to 1st requirement.
- (19)    10 minutes    Summary of entire subject.

## INTERNAL DEVELOPMENT

4 Hours

The purpose of this subject is to familiarize the student with the social, economic and political aspects of internal development. The role of indigenous military forces in development is also identified.

- |      |                   |  |
|------|-------------------|--|
| (1)  | <u>5 minutes</u>  | Introduction.  |
| (2)  | <u>10 minutes</u> | Definition of Internal Development.  |
| (3)  | <u>40 minutes</u> | Differences between relatively modernized and relatively non-modernized societies. |
| (5)  | <u>20 minutes</u> | Sociological aspect of internal development--Value theory and social change.       |
| (6)  | <u>15 minutes</u> | Sociological aspects of internal development--institutional development.           |
| (7)  | <u>3 minutes</u>  | Introduction to Lesson 2.  |
| (8)  | <u>22 minutes</u> | Economic aspects of internal development.  |
| (9)  | <u>25 minutes</u> | Political aspects of internal development.   |
| (10) | <u>30 minutes</u> | Role of indigenous military forces in development.                                 |
| (11) | <u>17 minutes</u> | Tasks for developing nations.  |
| (12) | <u>3 minutes</u>  | Summary.   |

## INTERCULTURAL COMMUNICATION

4 Hours

The purpose of this subject is to familiarize the student with the process of effecting communication across cultural boundaries. This instruction is concerned with internal defense and development.

- |      |                   |  |
|------|-------------------|--|
| (1)  | <u>5 minutes</u>  | Introduction.  |
| (2)  | <u>30 minutes</u> | Instructional television presentation: "The Meaning of Culture."   |
| (3)  | <u>10 minutes</u> | Discussion of critical points in reading assignment and ITV presentation.  |
| (4)  | <u>30 minutes</u> | Presentation of primary message systems.<br>This is a discussion of Edward Hall's ten basic types of human activities as a tool for investigating and understanding a culture. |
| (5)  | <u>5 minutes</u>  | Introduction to First Requirement.<br>The requirement is an investigation of the American culture using the ten primary message systems of Edward Hall.                        |
| (6)  | <u>18 minutes</u> | Tablemate discussion of first requirement.   |
| (7)  | <u>2 minutes</u>  | Summary  |
| (8)  | <u>3 minutes</u>  | Introduction to Lesson 2.  |
| (9)  | <u>27 minutes</u> | Full class discussion of first requirement.  |
| (10) | <u>8 minutes</u>  | Presentation of communication model.<br>A discussion of the communication process as comprising six elements.  |
| (11) | <u>7 minutes</u>  | Discussion of communication model in intercultural setting.  |
| (12) | <u>8 minutes</u>  | Presentation of Ethnocentrism.   |
| (13) | <u>7 minutes</u>  | Presentation of culture shock.   |
| (14) | <u>15 minutes</u> | Presentation of tool kit.<br>The tool kit is a set of questions designed to "promote thought relative to the problems inherent in communicating in another culture."           |

- (15)    10 minutes    Tablemate discussion of first requirement, lesson 2.  
An analysis of two brief accounts of assistance efforts  
utilizing the "tool kit. "
- (16)    12 minutes    Full class discussion of requirement.
- (17)    3 minutes    Summary.

THE MILITARY ADVISOR  
R7220/3 4 hrs.

The purpose of this lesson is to familiarize the student with the role of a U. S. Army Officer when assigned to military advisory duties in a foreign country, with emphasis on the developing nations and advisor-counterpart relationships. The overall U. S. objectives that an advisor seeks to attain are identified; his general duties and responsibilities are outlined; the policies governing his conduct and the preparatory training he may receive are discussed. Principal emphasis is placed on understanding the intercultural and interpersonal problems that face both the advisor and his counterpart and on identifying the personal attributes that many successful advisors have tried to cultivate in themselves.

- |     |  |  |
|-----|--|--|
| (1) | <u>10 minutes</u>                      | Introduction   |
| (2) | <u>50 minutes</u>                      | Role and Functions of the Military Advisor<br><br>This is instructor-led discussion of the role of the U. S. Army Officer in fulfilling his duties as a military assistance advisor in a foreign country.  |
| (3) | <u>30 minutes</u><br><u>20 minutes</u> | Advisory Qualifications<br>Advisory Selection Criteria, MAOP/FAS Program<br><br>This is instructor-led discussion aimed at identifying some of the desirable professional qualifications that an advisor should possess as either the result of experience or training. The MAOP/FAS program is also described to the students.  |
| (4) | <u>40 minutes</u>                      | Problems an Advisor Might Encounter (cultural and/or individual, culture-related and/or job-related). Introduction of intercultural communications ITV tapes.<br><br>This is instructor-led discussion of potential problems in the advisor-counterpart relationship that may result due to cultural, professional, ethnic, and other causes, and of possible solutions to these problems. |
| (5) | <u>40 minutes</u>                      | Full Class Discussion of ITV Tapes<br><br>The tapes and the discussion are to deal with the problem of identifying American cultural characteristics as they affect intercultural communication.   |
| (6) | <u>10 minutes</u>                      | Summary  |

**U. S. FOREIGN ASSISTANCE PROGRAMS**  
**R7300/3** **6 hrs.**

The purpose of this lesson is to examine current U. S. foreign assistance programs as an element of our national strategy and tool of our foreign policy; to analyze the role foreign assistance plays in internal defense and development; to review the governmental structure and responsibilities for administering assistance programs; and to apprise the student of the purposes and different forms of U. S. foreign assistance.

- |      |                   |  |
|------|-------------------|--|
| (1)  | <u>10 minutes</u> | Introduction   |
| (2)  | <u>15 minutes</u> | History of U. S. Foreign Assistance  |
| (3)  | <u>5 minutes</u>  | Purposes of U. S. Foreign Assistance   |
| (4)  | <u>10 minutes</u> | Legal Basis for U. S. Assistance   |
| (5)  | <u>10 minutes</u> | U. S. Foreign Assistance vis-a-vis the Nixon Doctrine<br><br>The first hour is an instructor-led discussion of historical background, purposes, legal basis and strategy relative to the Nixon Doctrine of U. S. Foreign Assistance.   |
| (6)  | <u>20 minutes</u> | Roles and Responsibilities in the U. S. Foreign Assistance Program   |
| (7)  | <u>25 minutes</u> | Coordination of the U. S. Assistance Effort  |
| (8)  | <u>5 minutes</u>  | Discussion of Homework Assignment for Lesson 2 (first requirement, period 2)<br><br>The second hour is an instructor-led discussion of national organization, responsibilities, and coordination of U. S. Foreign Assistance. Discussion deals with the organizations for foreign assistance and the role of each agency in support of developing nations. |
| (9)  | <u>5 minutes</u>  | Introduction to first requirement  |
| (10) | <u>40 minutes</u> | Work Group Discussion; Students prepare debate positions   |
| (11) | <u>50 minutes</u> | Student debate, full class discussion of the first discussion<br><br>These 95 minutes and the debate are concerned with the pros and cons of U. S. Foreign Aid.  |

- (12) 25 minutes U. S. Development and Humanitarian Assistance Programs to Include the Alliance for Progress
- (13) 10 minutes Multilateral Aid
- (14) 10 minutes PL 480 (Food for Peace)
- This section deals with the ways and the specific programs through which the U. S. provides humanitarian and developmental assistance.
- (15) 10 minutes Peace Corps and other volunteer aid agencies
- (16) 10 minutes U. S. S. R. Aid
- (17) 20 minutes Future of U. S. Foreign Aid; the Peterson Report and Pending Legislation
- (18) 10 minutes Summary
- This section is an instructor-led discussion of the Peace Corps and other volunteer aid agencies, Soviet aid to non-bloc countries, and the outlook for U. S. foreign assistance programs.

## **U. S. SECURITY ASSISTANCE PROGRAMS\***

**8 hours**

The purpose of this subject appears to be to familiarize the student with U. S. Security Assistance Programs and how they serve as a major instrument of U. S. foreign policy.

- (1) The history and evolution of security assistance.
- (2) A discussion of each of the different kinds of security assistance.
- (3) The organization of the U. S. Government to conduct security assistance activities.
- (4) The roles and responsibilities of the various national departments and agencies in planning, programming, and managing security assistance.
- (5) The use of defense articles and services in support of U. S. security assistance activities.
- (6) An understanding of International Logistics as the logistical support to the Security Assistance Program.

The references include: The International Security Assistance Act of 1971.  
Information and Guidance on Military Assistance  
Grant Aid and Foreign Military Sales  
DOD Military Assistance and Sales Manual

\* No lesson plan was available for this course. It is apparently a revision and expansion from six to eight hours of what has previously been called U. S. Military Assistance Programs. The topics covered in this course have been determined with the use of the summary description of the course. The amount of time spent on each topic was not available.

TAB D

AREA ORIENTATION SUBCOURSE,  
MAO C&SC

## TAB D

### AREA ORIENTATION SUBCOURSE, MAO C&SC

1. An analysis of the MAO C&SC POI for area orientation reveals two basic problems:
  - a. The POI attempts too much in too short a time.
  - b. The POI neglects the military dimension of area studies.
2. The lesson plan for Sub-Saharan Africa provides a microcosmic example of the weaknesses in MAO C&SC area orientation.
  - a. The lesson plan covers an enormous body of data--geography, history, impact of foreign interests, regional nationalism, political systems, economic situation, development assistance in the region, communist influence, role of the military, role of religion, and U.S. interests and policy. This collection of diverse and complex data is presented in three hours of instruction.
    - (1) As a result of this mad dash through the tropics, the lesson plan is inescapably superficial.
    - (2) Some of the lesson plan's most suggestive insights, and there are many, remain undeveloped and elusive. The result is a fragmented lesson plan in a fragmented sub-course.
    - (3) The lesson plan duplicates coursework that many FAOs receive in their civilian MA programs.
  - b. In addition to the superficiality and duplication that characterizes the Sub-Saharan Africa lesson plan, the topic completely neglects the military dimension of area studies.
    - (1) Although the course administrators obviously recognize the importance of the military dimension, there is no sustained portion of the lesson plan in which area studies information is translated into operational and conceptual referents of a military nature.
    - (2) The single explicit connection between area studies data and the military orientation comes in a homework assignment, Supplement 3, p. AS-3-1: "As you read about demographic distributions, migratory trends, racial characteristics and distribution, linguistic variety and classifications, ethnic groupings and cultural area classifications, and various

life styles, ask yourself the current relevance of such information to yourself as a student, to the individual in the society, to the leadership of a country or to a change agent, an advisor, hired by or accredited to a government in Africa. " Yet the student cannot be expected to isolate the military dimension of area studies data if the POI gives him no significant direction in the venture.

- (3) The Sub-Saharan Africa lesson plan misses a magnificent opportunity to probe the military dimension of area studies data at pp. D-LM-10-12. The POI surveys characteristics of African military forces, but it offers no suggestions regarding the meaning of these insights for American military personnel. What demands would the peculiar structure of African society and African military organization place on MAAG personnel? Since American officers will have more direct contact with African officers than with other elements of African society, it would be useful for FAOs to consider the special problems of counterpart relations in African states. It would also be valuable for FAOs to learn how the professional self-image of African officers affects their style of operations, their position within the larger society, and the demands they will make on American resources.

COMPLETED FORM,

"ESSENTIAL INFORMATION ON GRADUATE  
PROGRAM FOR FAO STUDENTS"

**ESSENTIAL INFORMATION ON GRADUATE PROGRAM FOR FAO STUDENTS**

Date Form Completed: \_\_\_\_\_

(1) UNIVERSITY NAME AND LOCATION: University of Alabama  
Tuscaloosa, Alabama

(2) AREA OF THE WORLD TO BE STUDIED: Latin America

(3) LOCATION OF PROGRAM ADMINISTRATION FOR THIS AREA: Latin American  
Studies Program

(4) ENTRY REQUIREMENTS:

(a) Minimum Acceptable GRE Score: 1000 (b) Academic Average B

(c) Language: A reading knowledge of Spanish or Portuguese

(d) Other:

(5) THESIS REQUIREMENTS:

None \_\_\_ Optional ☒ Required \_\_\_

(6) PROGRAM LENGTH:

	Mos.	Min. Hrs. (Sem.), Qtr. )
Thesis Program	12	26 + thesis
Non-thesis Program	12	32

(7) PROGRAM DEGREE REQUIREMENTS:

Thesis Program

1. 15 hours in one department for concentration \*
2. 9 hours in two related fields
3. Seminar in Latin American Studies
4. Proficiency in conversational Spanish or Portuguese
5. Must pass a written comprehensive and oral examination over the whole field of study and the thesis

Non-Thesis Program

1. 15 hours in one department for concentration \*
2. 15 hours in two or more related fields
3. Seminar in Latin American Studies
4. Proficiency in Conversational Spanish or Portuguese
5. Must pass a written comprehensive and an oral examination in the area of concentration and in each of the related fields.

\*Disciplines available for concentration are: Anthropology, Economics, Geography, Latin American History, Spanish, Sociology.

(8) OFFICIAL TITLE OF DEGREE AWARDED: Master of Arts in  
Latin American Studies

---

(9) AREA SPECIFIC GRADUATE COURSES AVAILABLE (list alphabetically by discipline)

1. Anthropology

Any of the courses listed below may be of Latin American content \*

108	Ancient Civilizations of Mesoamerica
113	Peoples of Latin America
119	Advanced Field Investigations in Archaeology
131:132	Readings in Anthropology
140	Archaeological Botany
202	Seminar in Cultural Anthropology
224	Seminar in Physical Anthropology
225	Seminar in Social Anthropology
228	Seminar in Archeology
240	Man in His Environment
242	The High Civilizations
251-252	Individual Investigations

2. Economics

These courses may carry Latin American content.

106	Modern Economic Systems
117	International Economics
135	Economic Development and Growth
186	International Finance
198	Economic Development of Latin America
206	Comparative Economic Systems
217	Advanced International Economics
218	Seminar in the International Economics of Development
235	Theory of Economic Development
237	Seminar in Regional Analysis
286	International Prices
290:291	Research in Economics

3. Geography

131:132	Special Research in Geography
145	Seminar: The American Tropics
201	Seminar in Physical Geography
202	Seminar in Regional Geography
204	Regional Studies Seminar
245	Seminar: South America
247	Seminar: Middle America

4. History

140	History of New Spain
142	The Spanish South and Southwest
143	South America in the 19th Century

(9) Area Specific Graduate Courses Available (Continued)

4. History (Continued)

- 144 Modern South America (Twentieth Century)
- 145 Relations of the U. S. and Latin America
- 147 The Caribbean Area
- 149 History of Spain from 1469-1700
- 150 Spain since 1700
- 201 Directed Reading and Individual Research
- 220 Proseminar in Latin American History
- 265 Special Studies Seminar
- 270 Seminar in Latin American History, Colonial Period
- 272 Seminar in Latin American History, Modern Period

5. International Business

- 123 International Marketing
- 132 World Resources and Trade
- 200 Seminar in International Business I
- 201 Seminar in International Business II

6. Latin American Studies

- 198 Seminar in Latin American Studies (2 semester hours of credit)
- 298 Seminar in Latin American Studies (2 semester hours of credit)

7. Political Science

- 123 The Politics of Developing Nations
- 125 Comparative Political Systems
- 130 Comparative Administration
- 253 Problems in International Relations
- 263 Problems in Comparative Political Systems

8. Sociology

- 109 Social Aspects of Latin American Life
- 121:122 Readings in Sociology
- 222 Population Analysis
- 223 Advanced Population
- 226 Social Change
- 227 Urbanization in Latin America
- 255:256 Independent Research

9. Spanish Language and Literatures

- 109 Modernista Poetry
- 111:112 Spanish American Novel
- 115 The Generation of '98

- continued -

(9) Area Specific Graduate Courses Available (Continued)

9. Spanish Language and Literatures (Continued)
- |         |  |
|---------|--|
| 121:122 | Nineteenth Century Spanish Literature            |
| 125:126 | Twentieth Century Spanish Literature             |
